Executive Brief | Commercial Profit Intelligence

Scope: Independent educational supply-chain profitability dashboard, evaluated on 16,000 wholly synthetic transaction lines. All figures below describe generated demo records, not APL Logistics company performance.

Portfolio snapshot

Metric	Synthetic demonstration result
Valid transaction lines	16,000
Net sales	2,089,193.10 CU
Recorded synthetic profit	276,686.22 CU
Weighted net margin	13.24%
Discount amount	216,236.90 CU
Loss-making transaction lines	3,595 (22.5%)
Customers with negative aggregate profit	81

Highest and lowest category performance

Category	Net sales (CU)	Profit (CU)	Margin
Equipment	513,054	76,124	14.8%
Apparel	438,118	58,288	13.3%
Electronics	395,986	55,675	14.1%
Accessories	380,974	44,083	11.6%
Footwear	361,061	42,516	11.8%

Recommended decision process

Use the dashboard to isolate negative-profit transaction lines, review category and customer concentration, compare shipping-mode associations, and run bounded discount sensitivity checks. For real deployment, first validate contract prices, complete costs, data definitions and access permissions. A pilot and monitoring period would be needed before adopting any pricing action.

Evidence and limitations

This public release uses a deterministic synthetic generator. It does not establish actual customer value, verified shipping-cost leakage, demand elasticity, or causal discount effects. The discount slider is a fixed-volume accounting sensitivity only. No company-affiliation or financial-audit claims are made.
